

Overview

This report contains five years (2004-2008) of AP enrollment and AP exam aggregate historical data. The data has been subdivided by subject area.

Definitions

AP Enrollment

This count is derived from student transcript data and reflects the average of Fall and Spring semester enrollment in AP courses. Note – a student enrolled in two or more courses will be counted two or more times.

GPA

Unweighted average of grades received in AP courses.

Number of Exams

Total number of AP exams taken. Note – a student that took two or more exams will be counted two or more times.

Avg Score

Valid AP exam scores are 1,2,3,4,5. This metric is the average of the AP exam scores.

Score Distribution (%) – 1,2,3,4,5

The number of exams on which a particular score was received divided by the total number of AP exams taken.

Score Distribution (%) – 3 or Better

The number of exams on which a score of 3, 4, or 5 was received divided by the total number of AP exams taken.

Notes

This report was created for each IIS area and school. Schools were assigned to areas based on the 2008 CPS organization. A citywide report was also created. AMPS and Performance schools that have opted out of area level reporting were excluded from their area report and aggregated into separate AMPS and Performance reports.

Please be aware that enrollment in an AP course does not require that the student take the corresponding (or any) AP exam. And conversely, if a student took a particular exam this does not mean that he had taken the corresponding (or any) AP course.

Due to the nature of this data there are many instances where the size of a group for which metrics were to be provided is very small (i.e., <10). To maintain student anonymity, metrics for those groups of students have been suppressed.

We do not have AP enrollment data for charter schools – area 52. Therefore, area and school level reports for area 52 were generated, but area 52 students were not included in the citywide report
